

**AMENDMENTS TO THE CLAIMS**

This listing of the claims replaces all prior versions, and listings, of claims in the application:

**Listing of Claims**

1. (Currently Amended) A wireless communications device for use in a wireless network, comprising:

at least one processor for controlling operation of at least two communications capabilities;

a first input device coupled to the at least one processor for accepting an input;

at least one display device coupled to the processor for communicating an output;

a communications subsystem coupled to the at least one processor for communicating with the wireless network;

a memory coupled to the at least one processor, having instructions that cause the processor to implement a user interface for controlling operations of the wireless communications device, the user interface including:

at least one component to compose a destination for an outgoing communication generated by one of the at least two communication capabilities of the device, said component providing simultaneously together:

a prompt defining a field for receiving the destination as text; and

a hot list of candidate destinations selectable through the user interface; and

at least one main screen displaying a plurality of application icons operable to invoke respective applications and control the at least one component, one of the respective applications being invokable via selection of one of the application icons,

wherein the at least one component to compose the destination is invokable from the main screen via selection of one of the application icons and is also

invokable ~~in-response-to~~ after an alphanumeric input of a portion of the destination is received through the first input device.

2. (Previously Presented) The wireless communications device of claim 1, wherein the first input device is a key-based input device to input the destination.
3. (Cancelled)
4. (Previously Presented) The wireless communications device of claim 1 wherein the destination is a telephone number to be called and the input is a portion of the telephone number, wherein the input of the portion of the telephone number invokes a component to compose the destination for a telephone communication capability.
5. (Previously Presented) The wireless communications device of claim 1 wherein the portion of the destination populates the prompt when the component to compose a destination is invoked.
6. (Currently Amended) The wireless communications device of claim 1 wherein the component to compose a destination is invokable ~~in-response-to~~ after at least one of: an interaction with a main screen component of the user interface from which to invoke a communication capability from among a plurality of communication capabilities provided by the wireless communications device; and input from an auxiliary input device.
7. (Currently Amended) The wireless communications device of claim 1 wherein the component to compose a destination is further invokable ~~in-response-to~~ after at least one of: an interaction with the main screen component of the user interface; and input from an auxiliary input device.
8. (Original) The wireless communications device of claim 1 wherein the component to compose a destination is enabled to move between the prompt and hot list.
9. (Currently Amended) The wireless communications device of claim 1 wherein the component to compose a destination is adapted to provide a filtered list of destinations from a store of destinations on the device ~~in-response-to~~ after a filter input received at the user interface, said filtered list selectable at the user interface to choose a destination.
10. (Original) The wireless communications device of claim 1 wherein the prompt is adapted to permit navigating and changing the destination while composing.

11. (Original) The wireless communications device of claim 1 wherein the component to compose a destination is adapted to provide at least one action button for terminating composition of the destination.

12. (Currently Amended) In a wireless communications device for use in a wireless network, a method for composing a destination for an outgoing communication generated by the device comprising:

providing at least one main screen displaying a plurality of application icons operable to invoke respective applications and control at least one component to compose a destination, one of the respective applications being invokable via selection of one of the applications icons;

wherein the at least one component to compose a destination is for composing a destination for an outgoing communication generated by one of at least two communication capabilities of the device;

invoking the at least one component to compose the destination from the main screen ~~in response to~~ after one of: a selection of one of the application icons and an alphanumeric input of a portion of the destination;

providing the component to compose the destination by providing simultaneously together:

a prompt defining a field for receiving the destination as text; and

a hot list of selectable candidate destinations.

13. (Currently Amended) The method of claim 12 including:

receiving the destination using the prompt ~~in response to~~ after a key-based input.

14. (Cancelled)

15. (Previously Presented) The method of claim 12 wherein the destination is a telephone number to be called and the input is a portion of the telephone number, wherein the component to compose the destination for a telephone communication capability is invoked.

16. (Previously Presented) The method of claim 12 comprising populating the prompt with the portion of the destination.

17. (Cancelled)

18. (Currently Amended) The method of claim 12 comprising moving between the prompt and hot list ~~in-response-to~~ after navigation about the composition screen.

19. (Original) The method of claim 18 comprising receiving the destination selected from the hotlist and generating the outgoing communication in response.

20. (Currently amended) The method of claim 13 comprising providing a filtered list of destinations from a store of destinations on the wireless communications device ~~in-response to~~ after a filter input at the user interface, said filtered list selectable to choose the destination.

21. (Original) The method of claim 12 comprising receiving the destination and generating the outgoing communication in response.

22. (Original) The method of claim 12 comprising providing a cursor adapted for use in navigating and changing the destination while composing.

23. (Original) The method of claim 12 comprising providing at least one action button for terminating composition of the destination.

24. (Currently Amended) A computer program product having a computer readable medium tangibly embodying computer executable code stored thereon for composing a destination for an outgoing communication generated by a wireless communications device for use in a wireless network, said computer program product comprising:

code for providing at least one main screen displaying a plurality of application icons operable to invoke respective applications and control at least one component to compose a destination, one of the respective applications being invokable via selection of one of the applications icons;

wherein the at least one component to compose a destination is for composing a destination for an outgoing communication generated by one of at least two communication capabilities of the device;

code for invoking the at least one component to compose the destination from the main screen ~~in-response-to~~ after one of: a selection of one of the application icons and an alphanumeric input of a portion of the destination;

code for providing the component to compose the destination by providing simultaneously together:

a prompt defining a field for receiving the destination as text; and

a hot list of selectable candidate destinations.

25. (Previously Presented) The wireless communications device of claim 1, wherein the at least two communications capabilities comprise a voice communication capability and a data communication capability.

26. (Previously Presented) The method of claim 12, wherein the at least two communications capabilities comprise a voice communication capability and a data communication capability.

27. (Previously Presented) The wireless communications device of claim 1, wherein the destination is an email address and the input is a portion of the email address, wherein the input of the portion of the email address invokes a component to compose the destination for an email communication capability.

28. (Previously Presented) The method of claim 12, wherein the destination is an email address and the input is a portion of the email address, wherein the composition screen for an email communication capability is invoked.

29. (Previously Presented) The wireless communications device of claim 1, wherein the at least two communications capabilities include two different data communication capabilities.

30. (Previously Presented) The wireless communications device of claim 29, wherein the two different data communication capabilities comprise at least two of email, web browsing, text message and instant message capabilities.

31. (Previously Presented) The method of claim 12, wherein the at least two communications capabilities include two different data communication capabilities.

32. (Previously Presented) The method of claim 31, wherein the two different data communication capabilities comprise at least two of email, web browsing, text message and instant message capabilities.

33. (Currently Amended) The wireless communications device of claim 1, wherein, in response to after determining that the alphanumeric input is a telephone number, the

component to compose a destination is ~~invoked dependent on the type of alphanumeric input~~ a composition screen for a telephone call, and after determining that the alphanumeric input is a URL address, the component to compose a destination is a web browser.

34. (Currently Amended) The method of claim 12, wherein, ~~in response to~~ after determining that the alphanumeric input is a telephone number, the component to compose a destination is ~~invoked dependent on the type of alphanumeric input~~ a composition screen for a telephone call, and after determining that the alphanumeric input is a URL address, the component to compose a destination is a web browser.

35. (Currently Amended) A wireless communications device for use in a wireless network, comprising:

at least one processor for controlling operation of voice and data communications capabilities;

a first input device coupled to the at least one processor for accepting an input;

at least one display device coupled to the processor for communicating an output;

a communications subsystem coupled to the at least one processor for communicating with the wireless network;

a memory coupled to the at least one processor, having instructions that cause the processor to implement a user interface for controlling operations of the wireless communications device, the user interface including:

at least one component to compose a destination for an outgoing communication generated by either of the voice and data communication capabilities of the device, said component providing simultaneously together:

a prompt defining a field for receiving the destination as text; and

a hot list of candidate destinations selectable through the user interface; and

at least one main screen displaying a plurality of application icons operable to invoke respective applications and control the at least one component, one of

the respective applications being invocable via selection of one of the application icons;

wherein the at least one component to compose the destination is invocable from the main screen via selection of one of the application icons and is also invocable in response to after an alphanumeric input of a portion of the destination is received through the first input device.

36. (New) The wireless communications device of claim 1, wherein, after determining that the alphanumeric input is a telephone number, the component to compose a destination is a composition screen for a telephone call, and after determining that the alphanumeric input is an email address, the component to compose a destination is an email message composition screen.

37. (New) The method of claim 12, wherein, after determining that the alphanumeric input is a telephone number, the component to compose a destination is a composition screen for a telephone call, and after determining that the alphanumeric input is an email address, the component to compose a destination is an email message composition screen.
